

Input

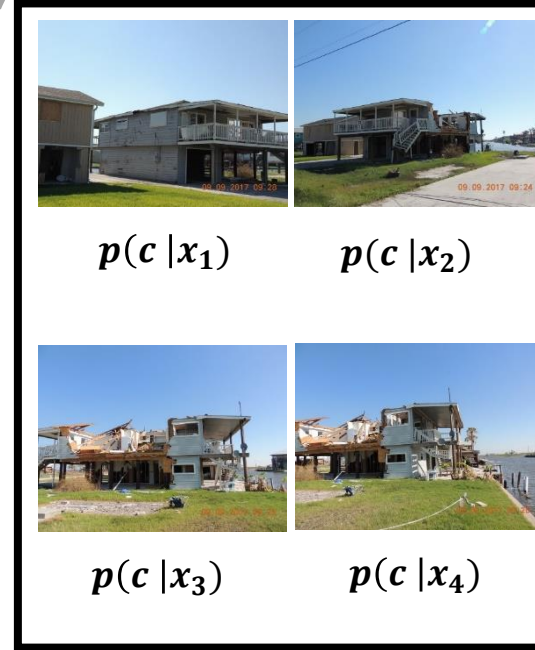

Reading post-event geo-tagged raw images

B1

Filtering OV images
(overview classifier)

B2

Quantifying MD probability
of each image
(Damage classifier)

$$p(c | x_1, \dots, x_4)$$

Major Damage
(MD)

Non-Major
Damage
(NMD)

Fusing information of
all images to quantify
MD probability of the
target building

ND

MD

NMD

Making final
decision for the
target building
