

Input

A1

A2

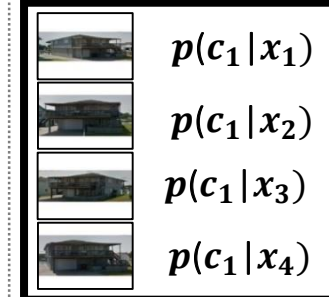

Downloading n
panoramas
from street view
imagery

Reprojection
of panoramas
to optimal
angles
rectilinear
images

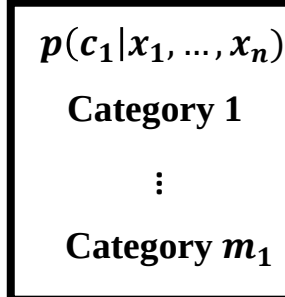

Detecting the
available
optimal views of
the target
building

Preparation of the multiple views of pre-
event images of the target building

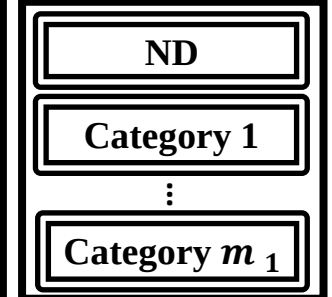

Attribute 1

⋮

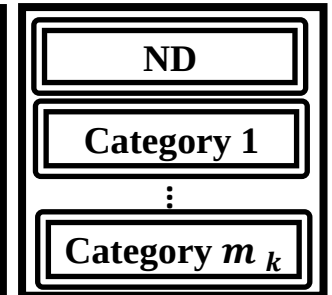

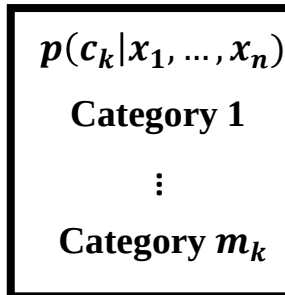

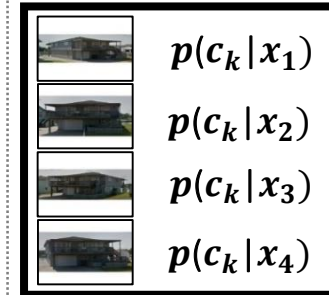

⋮

⋮

Attribute k

Quantifying attributes
probability of each
image
(*image classifiers*)

Fusing information
of all images to
quantify each
attribute probability
of the target building

Making final
decision for each
attribute of the
target building
